NSBM GREEN UNIVERSITY

Faculty of Computing

Module: Web and Mobile Application Development | Batch: 26.1 IFSL

FINAL PROJECT ASSIGNMENT

Instructions, Project Topics and Submission Guidelines

1. Objective

Students are required to select ONE of the four project topics listed below and develop a complete web-based application using HTML, CSS, JavaScript, PHP, and MySQL. The project must demonstrate both frontend and backend development skills, together with full database integration and CRUD (Create, Read, Update, Delete) operations.

Instructions to read this document

- Read all four project topics before selecting one for your group.
- Review the Overall Project Requirements and Deliverables sections carefully – these apply to every topic.
- Check the Evaluation Criteria to understand how marks are distributed.
- Note the Submission Deadline and the Important Guidelines before you begin.

2. Project Topics – Select ONE

Each group must choose only one of the following four topics.

Project Topic 1: NSBM NewsDesk – Campus News Management System

Main Idea

Develop a web application that allows the university to publish, organise, and manage campus news and announcements, while giving students an easy way to stay informed about faculty, club, and event updates.

Expected Features – Admin

- Login
- Create, edit, and delete news articles
- Manage news categories (academic, events, sports, general)
- Approve or reject articles submitted by students/clubs
- Manage announcements and featured/breaking news
- Moderate reader comments
- Generate readership/engagement reports

Expected Features – Student / User

- Register and login
- Browse the latest news and announcements
- Search and filter news by category or date
- Submit articles or announcements for approval
- Comment on news articles
- Bookmark/save articles for later reading
- Subscribe to specific news categories

Project Topic 2: NSBM ArtCraft – Student Arts and Handcraft Showcasing System

Main Idea

Develop a web application that allows students to showcase their artwork, handcrafted items, and creative projects to the wider NSBM community, and to participate in exhibitions and creative showcases.

Expected Features – Admin

- Login
- Manage art/craft categories (painting, sketching, handcraft, photography, etc.)
- Approve or reject submitted artworks
- Create and manage showcase events/exhibitions
- Feature selected artworks on the homepage
- Generate submission and participation reports

Expected Features – Student / User

- Register and login
- Upload artwork/handcraft items with images and descriptions
- Browse the gallery by category or artist
- Like, comment on, and rate showcased items
- Follow favourite artists/creators
- Register to participate in showcase events/exhibitions
- View personal submission history

Project Topic 3: NSBM SportsHub – Sports Club Management System

Main Idea

Develop a web application that helps university sports clubs manage memberships, training schedules, matches, and tournaments, while allowing students to join clubs and track their participation.

Expected Features – Admin

- Login
- Manage sports clubs and club membership approvals
- Schedule training sessions and matches
- Create and manage tournaments/fixtures
- Record match results and scores
- Manage facility/equipment booking requests
- Generate participation and performance reports

Expected Features – Student / User

- Register and login
- Browse and join sports clubs
- View training schedules and match fixtures
- Register for tournaments/matches
- View match results and standings
- Book training facilities/equipment
- Track personal participation history

Project Topic 4: NSBM StudyCircle – Student Community for Notes and Study Sharing

Main Idea

Develop a collaborative platform where students can share lecture notes and study materials, ask academic questions, form study groups, and support one another's learning across modules.

Expected Features – Admin

- Login
- Manage users
- Approve uploaded notes/study materials
- Manage subjects and categories

- Moderate discussion forums and Q&A posts
- Generate resource usage/engagement reports

Expected Features – Student / User

- Register and login
- Upload and share lecture notes/study materials
- Download study materials by subject
- Ask and answer academic questions in a discussion forum
- Create or join study groups
- Schedule group study sessions
- Rate and comment on shared resources

3. Overall Project Requirements

Technology Stack

- Frontend: HTML, CSS, JavaScript (Bootstrap or Material UI may be used)
- Backend: PHP (Mandatory)
- Database: MySQL (Mandatory)

Functional Requirements

Each project should include:

- Separate Admin and Student/User interfaces
- Secure login functionality
- Complete CRUD (Create, Read, Update, Delete) operations
- Responsive and user-friendly interface
- Database integration using PHP and MySQL
- Proper form validation
- Navigation menus and consistent page layouts
- Search and filtering functionality where applicable

Students are encouraged to include additional innovative features beyond the minimum requirements.

4. Deliverables

4.1 Project Report (PDF or Word)

The report should include:

- Project title
- Team leader's name and contact details
- Names and roles of group members
- Introduction
- Project objectives
- Description of the system
- Screenshots of key features (Admin and Student/User interfaces)
- GitHub repository link to the complete source code (public/accessible repository)
- Live hosted link to the deployed working application
- Link to the demonstration video

4.2 Project Source Code and Live Hosting

- Push the complete project code to a GitHub repository (commit history should reflect each member's contribution).

- Ensure the repository is public, or accessible to the module lecturer if kept private.
- Deploy the application to a live hosting environment (e.g. InfinityFree, 000webhost, Heroku, Render, or a similar PHP/MySQL-compatible host) so the system can be accessed and tested online.
- Include both the GitHub repository link and the live hosted link in the project report.

4.3 Video Demonstration

Prepare one screen-recorded video demonstrating:

- Login functionality
- Admin panel
- Student/User panel
- CRUD operations
- Database functionality
- Main features of the system
- A brief explanation from each group member describing their contribution

Upload the video to YouTube (unlisted) or another accessible video platform and include the link in the report.

4.4 Submission

- Only the Team Leader (or one designated group member) should submit the final report through the LMS or submission platform.
- Ensure the GitHub repository, live hosted link, and video link are all accessible before submission.

5. Evaluation Criteria

Criteria	Marks
UI Design and Frontend	20%
Backend and Database Integration	20%
Admin Panel Functionality	15%
Student/User Panel Functionality	15%
Project Report, Screenshots, GitHub & Live Hosting Links	15%
Video Demonstration & Teamwork	15%

6. Important Guidelines

- Each group must select only ONE project topic from the four provided.
- The project must be developed using HTML, CSS, JavaScript, PHP, and MySQL.
- All applications must include a properly designed database.
- CRUD operations should be implemented throughout the system where appropriate.
- The complete source code must be maintained in a GitHub repository, and the working application must be deployed to a live hosting environment.
- The user interface should be professional, responsive, and easy to use.
- Students are encouraged to add creative and innovative features to enhance their project.
- The project should demonstrate teamwork, coding best practices, and proper documentation.
- All submitted work must be original. Plagiarism or copied projects will not be accepted.

7. Submission Deadline

Tentative Deadline: [TO BE CONFIRMED]

If you have any questions regarding the project requirements, please discuss them during lecture sessions or contact the module lecturer during working hours. We encourage you to be creative, apply the concepts learned throughout the module, and build a high-quality web application. Good luck!
